CAUTION!!! Sorption of liquids depends on the type of substance and also conditions – temperature and concentration. Therefore we recommend users to carry out own tests on a sorbent sample.

- suitable
- we recommend to try
- unsuitable

- Modern sorbents of liquids with high sorption power (up to 16 times more than its dead load).
- Textile sorbents are excellent and indispensable helpers there where it is necessary to solve operating leakages from machinery and equipment, where it is necessary to keep the workplace clean (cleaning sorbents) and where accidental and operational leakages of oily substances (oil sorbents) or aggressive chemicals (chemical sorbents) must be solved.

- Properties of individual types of sorbents:
Cleaning – universal sorbents for cleaning and sorption of any non-aggressive liquids.

Oil – absorb only oils and other petroleum substances, float on water surface.

Chemicals – serve for the elimination of leakages of aggressive chemicals (acids, alkalis).

* Sorption mats are packed in a cardboard box with a perforated hole for easy taking.
